

firstresponse

SAVE TIME & COST and get back to critical path faster with AsiaPac.

Provide peace of mind to your customers by assuring your rig package comes equipped with a fully traceable, maintained and certified **firstresponse** fishing package from AsiaPac Oil & Gas, along with expertly designed BHAs to respond to various fishing scenarios, and immediate 24/7 technical support.

AsiaPac's **firstresponse** service is designed for drilling contractors, allowing them to provide immediate response capability in the event of basic downhole retrieval scenarios, avoiding costly NPT while waiting on fishing contractor mobilisation and preparation.

firstresponse replaces old, outdated and generic rig fishing packages with newer, fully-maintained fit for purpose kits, specifically designed for your contract and operations. Removing the need to carry additional assets, worry about traceability, reinspection or maintenance, or having old, generic and worn-out equipment on standby, **firstresponse** fishing packages are deployed with your rig mobilisation, and can be changed as the project enters different phases of your operation in clearly labelled, easily identifiable and specially designed DNV 2.7.1 tool baskets.

There's a lot more than just equipment in a **firstresponse** fishing basket though. With a fishing package comes complementary 24/7 remote technical support, expertly optimised BHAs specific to the required fishing operation, free recertification and reinspection at required intervals, and the added assurance that the standby fishing package on the rig is in good condition, fit for purpose, and will get the operation back to critical path as quickly as possible.

AsiaPac's **firstresponse** service will strengthen your bids, reassure your customers, and maximise your revenue through minimizing NPT and keeping your operations moving ahead. Contact info@asiapacoilandgas.com today to discover more.
